## (54) TRANSMISSION AND RECEPTION DEVICE FOR MULTIMEDIA MAIL

### (57)Abstract:

PROBLEM TO BE SOLVED: To provide the multimedia mail transmission and reception device which can send moving picture data capable of transmitting even a delicate nuance regarding sender's transmit data to a reception-side terminal.

SOLUTION: A multimedia mail transmission device adds information for starting a program that classifies a text and media information on a reception-side mail server, into a main body and sends them. A reception device, on the other hand, starts this program to store the media information and text separately. An icon as an index of this media information is generated. On a reception-side client terminal, text information and moving picture icons 71a-71c as indexes are displayed. An icon is indicated to reproduce its moving picture.
